T3RRA Plane

T3RRA Plane is for operators of laser systems who want more accurate laser setup information, and on-screen cut/fill maps. It allows you to survey a field, break it into regions if necessary, create planar designs, and then drive on the map seeing exactly where your cut and fill zones are.

Plane and Simple

The Laser leveling solution with on-screen cut/fill maps

Fully capable

- Survey full field
- Survey drain lines
- Create field regions
- Create linear best-fit designs
- View dirt volumes
- Generate laser setup parameters
- Print reports
- Simulate before and after rainfall events
- Show current position on map of elevations, or cut/fills

High compatibility

- Works with many data formats and 3rd party systems
- Import elevations from many different sources
- Use RTK GPS to survey, but then implement using low cost stand-alone or differential GPS.

Great features

- Easy to use wizard operation
- 2D and 3D data views
- Animated rainfall simulation

Benefits

RTK GPS not required when levelling

Know your dirt volumes before you start work.

Save time and money by creating more accurate laser setup parameters.

Quicker on-boarding of new staff as they are aided by on-screen maps of location relative to cut and fill areas.

Travel less distance by knowing exactly where your cuts and fill need to be.

T3RRA Plane can be upgraded to our full landforming package (T3RRA Cutta) at any time for GPS control and non-linear design functionality.

About T3RRA

Rooted in agriculture, we are an innovative agile company that develops easy-to-use, powerful software that just works. Founded by 5 partners who have 125 years of agtech experience between them, we are dedicated to meeting the needs of farmers across the globe.
